

Portfolio Assignment: Wrapping up the Portfolio

Objectives:

- Finishing touches on the portfolio
- Reflect on the skills gained in creating the portfolio

Deliverables:

- Link to the completed Portfolio in eLearning

Instructions:

1. Check index page to make sure it includes working links to all work
2. Add a new page (or add to a previously created resume page) that lists the technical skills included in the portfolio, and the soft skills (communication, scheduling, time and project management, analytical thinking, flexibility, ability to work in a team or independently). 93% of employers want to see these soft skills mentioned, so here's your chance.
3. Add a summary paragraph to the index page that reflects your skills in ML, enthusiasm for ML, plans for future personal projects, plans for keeping up with this rapidly changing field, and interest in possible employment opportunities.

We will present your final Portfolios during the last week of class.

Caution: All course work is run through plagiarism detection software comparing students' work as well as work from previous semesters and other sources.
